Preparing for Baby

10 Tips to Keep Your Baby Safe
Feeling overwhelmed by all the choices and advice from friends and relatives about your new baby? What to do? What to buy? The video by the U. S. Consumer Product Safety Commission includes safety advice for new and expectant parents on shopping for nursery products/equipment including cribs, play yards, high chairs and strollers. It also contains the latest updates on federal standards for these nursery products.

Baby’s Almost Here: Advantages of Going Full Term
This video explains why it’s worthwhile go full term, maintaining the pregnancy as close to 40 weeks as possible. It outlines the risks of failed inductions prior to full term and explains valid reasons why a medically-indicated induction or C-sections prior to 40 weeks might be necessary. The program also will show how staying active builds stamina for the expectant mother to maintain the pregnancy to full term and it will illustrate the benefits that yoga offers to help manage stress during pregnancy.

Baby’s Almost Here: Managing Risks as You Approach Delivery
This video will illustrate the importance of prenatal education in reaching the full 40-weeks of pregnancy. It will explain the importance of maintaining a proper diet and nutrition, avoiding alcohol, drugs and cigarette smoke and controlling weight gain during pregnancy. It will provide guidance on natural, spontaneous labor that includes getting regular, prenatal checks, knowing warning signs to watch for and understanding the optimal window for brain and respiratory development. In addition, the program will discuss the dangers of using medications to induce labor, including long-term difficulties for children who are born pre-term, encouraging women to accept help and try to enjoy their pregnancies.

Baby’s First Test: Heart Disease Screening
Critical congenital heart disease (CCHD) represents a group of heart defects that cause serious, life-threatening symptoms, but are often treatable if detected early. Learn about this simple screening test that uses non-invasive pulse oximetry to measure how much oxygen is in the blood; helping to identify babies who may be affected by CCHD before they leave the hospital.

Babyproofing
Babies learn very quickly in their first year and in order for parents to ensure the home is a safe place parents must babyproof the house. This means taking a look at each room and removing or securing potential hazards. In this video we go from room to room and offer tips to make sure it’s a safe place for baby to grow and explore.

Building a Breastfeeding Support Network
Moms reveal how help and encouragement from others empowered them to breastfeed.

Preparing for Baby (continued)

Choosing a Doctor for Baby
Selecting your child’s healthcare provider is one of the most important decisions you’ll make. Know what to ask and look for when you’re seeking a new care provider.

Circumcision: What You Need to Know
Parents of boys have an extra decision to make after birth - whether or not to circumcise. Find out more about what circumcision is, the pros and cons of circumcision, and how to care for both the circumcised and uncircumcised penis.

Cleaning and Healthy Air
Providing a safe environment for your new little one starts from the moment you walk in the door. Surfaces should be clean, but make sure you are using cleaning products that are safe for baby. The air baby breathes should also be free of smoke or allergens, and carpets must be vacuumed regularly. This video will outline safe home cleaning practices and products and ways to maintain healthy air quality to ensure a clean and safe home for your baby.

Coping With The Baby Blues
Many new Moms experience feelings of sadness or anxiety right after the birth of the baby. "Coping With The Baby Blues" offers tips on how to deal with these feelings. Tips include leaning on your support system, healthy nutrition and getting regular exercise. Learn what you need to do to help beat the baby blues.

Drug and Alcohol Use: Making safe choices and seeking help
It is ideal to start making healthy lifestyle choices before you even know you’re pregnant - when you are trying to conceive or doing nothing to avoid becoming pregnant. These lifestyle choices include stopping smoking and using other nicotine products, avoiding alcoholic beverages, stopping or getting treatment for drug addictions and being sure that prescription and over the counter medications that you use are safe for developing a pregnancy. And once you know you are pregnant, what you put in your body becomes even more vital. This program will share concerns about using prescription medications, drugs or alcohol during pregnancy and what you can do to help ensure a safe journey and outcome for you and your baby.

Exercising Safely When You Have Gestational Diabetes
Learn why exercising safely is an important part of managing gestational diabetes, and understand how to prevent low blood glucose while exercising.

Infant CPR
When an infant is not breathing, it takes only four minutes without oxygen for brain damage to occur. So, time is critical. This video will show you the signs to watch for and teach you the basic steps of performing CPR on an infant.
Preventing Shaken Baby Syndrome
Learn what shaken baby syndrome is, the serious injuries it causes, and tips on how to comfort your baby while keeping them safe.

Rooming In With Your Baby
Rooming in is the practice of keeping mothers and babies together following hospital or maternity center birth. Learn how rooming in promotes breastfeeding, supports better rest for you and baby, and provides your family with a chance to bond earlier with your new addition.

Safe Infant Sleep for Grandparents and Other Trusted Caregivers
It is important for parents to understand ways to reduce the risk of sudden infant death syndrome (SIDS) and other sleep-related causes of infant death. It is equally important for parents to share and promote safe sleep to grandparents and other trusted caregivers. The video portrays what a safe sleep environment looks like and describes other ways to reduce the risk of SIDS and other sleep-related causes of infant death.

Secrets to Breastfeeding Success
Need some nursing know-how? These steps and strategies will help soon-to-be-moms make an informed, smooth transition into breastfeeding.

Preventing Shaken Baby Syndrome
Learn what shaken baby syndrome is, the serious injuries it causes, and tips on how to comfort your baby while keeping them safe.

Rooming In With Your Baby
Rooming in is the practice of keeping mothers and babies together following hospital or maternity center birth. Learn how rooming in promotes breastfeeding, supports better rest for you and baby, and provides your family with a chance to bond earlier with your new addition.

Safe Infant Sleep for Grandparents and Other Trusted Caregivers
It is important for parents to understand ways to reduce the risk of sudden infant death syndrome (SIDS) and other sleep-related causes of infant death. It is equally important for parents to share and promote safe sleep to grandparents and other trusted caregivers. The video portrays what a safe sleep environment looks like and describes other ways to reduce the risk of SIDS and other sleep-related causes of infant death.

Secrets to Breastfeeding Success
Need some nursing know-how? These steps and strategies will help soon-to-be-moms make an informed, smooth transition into breastfeeding.
Preparing for Baby (continued)

Stages of Labor
Every woman's labor is different, even from one pregnancy to the next. Labor may be prolonged or relatively short. Nevertheless, understanding the three stages of labor and what to expect in each can help you be prepared.

The Benefits of Breastfeeding
Learn the unique ways that breast milk can impact your child's health and reduce the risks of sudden Infant Death Syndrome (SIDS), asthma, obesity, and other health conditions.

The Workplace and Pregnancy
Pregnancy is an exciting time, and if you are employed outside the home you may be eager to share your good news with your co-workers. When is it a good time to tell? And how will your pregnancy affect you in the workplace? Learn what regulations are in place to protect you on the job and how to stay safe and productive at work.

Trimesters of Pregnancy
Pregnancy lasts about 40 weeks and is grouped into three trimesters starting from the first day of your last period. Your body goes through many changes as your baby grows and your bodies are both prepared for your due date of delivery. This program will share some of the normal changes you may experience during each trimester and why it’s healthiest for most moms and babies to go the full 40 weeks.

Understanding Gestational Diabetes
Learn what gestational diabetes is, and how hormones produced during pregnancy affect your blood glucose levels.

Well Baby Visits
This program increases Moms understanding of what takes place during well-baby visits. It explains the doctor’s examination of a new baby on the first visit after discharge from the hospital and at the second visit. It also advises Mom on how to prepare for the visit by providing a checklist of questions.

Zika 101
Dr. Anne Schuchat, Principal Deputy Director of the CDC’s Agency for Toxic Substances and Disease Registry explains what Zika is, how the virus is spread and how to best reduce your risk of infection especially if pregnant or trying to get pregnant.

Breastfeeding
Breast is Best (Part 3)
Once you get breastfeeding established, how do you know if your baby is getting enough to eat? Part 3 provides cues to watch for so you know that your baby is getting enough. It also provides tips for Mom on how to care for herself.

Breast is Best (Part 4)
In Part 4, Mom learns how to use a breast pump to make sure baby has enough milk when she has to be away.

Breastfeeding 411
There are many great resources, people and places to turn to for breastfeeding support and information. Find out what worked for other breastfeeding moms.

Breastfeeding and Back to Work
Breastfeeding doesn't have to stop because you have to go back to work. See how other women planned for their return to work and made arrangements with their employers.

Breastfeeding as a Single Mom
Just because you’re single, doesn’t mean you’re alone. Single moms share their stories of support.

Breastfeeding Basics (Part 1): Why I Breastfeed
“Breastfeeding Basics: Why I Breastfeed” (Part 1) covers important topics for mothers. This video describes the benefits of breastfeeding for Mother and baby.

Breastfeeding Basics (Part 2): Breast Pumping
“Breastfeeding Basics: Breast Pumping” (Part 2) covers important topics for mothers. This video details the basics of pumping from how to choose a pump to the proper storage of the milk.

Breastfeeding Basics (Part 3): Proper Positioning
“Breastfeeding Basics: Proper Positioning” (Part 3) covers important topics for mothers. This video provides how-to demonstrations on the different holds and ways to create a comfortable position for both Mom and baby while breastfeeding.

Breastfeeding Basics (Part 4): Back to Work
“Breastfeeding Basics: Back to Work” (Part 4) covers important topics for mothers. This video explains how with a little work and support from those around her Mom can easily continue to breastfeed even once she goes back to work.

Breastfeeding in Public for New Moms
Moms share their breastfeeding experiences and offer tips on how to handle a hungry baby while on the go.

Breastfeeding Made Easy (Part 1)
This program discusses the numerous benefits of breastfeeding. Part 1 explains why breastfeeding is important for both Moms and babies.

Breastfeeding Made Easy (Part 2)
Part 2 takes mothers through the basics of breastfeeding step-by-step including proper positioning and how to get a good latch.
Breastfeeding (continued)

Breastfeeding Made Easy (Part 3)
Understanding how to feed baby properly is very important. Part 3 explains that baby’s don’t feed on a certain schedule. Moms should feed baby when the baby is hungry. An “on demand” schedule is recommended for a new baby.

Breastfeeding Made Easy (Part 4)
Breastfeeding is a skill that moms and babies have to develop together. Part 4 discusses keeping a breastfeeding log, breast care and breast pumping. It also highlights how a support group can help with breastfeeding.

Breastfeeding Your Newborn
Watch this clip for a general explanation of how to approach breastfeeding to help get both mother and baby in a comfortable breastfeeding routine.

Breastfeeding: Breast Milk Production and Benefits
Learn how your post-pregnancy breasts produce enough milk to feed your baby, and how breastfeeding is healthy for both of you.

Breastfeeding: Overcoming the Challenges of Breastfeeding
Learn some effective strategies for managing the problems and stresses that new breastfeeding mothers often experience.

Breastfeeding: Proper Latch-on and Removal from the Breast
Watch several moms demonstrate how to properly attach their babies to their breasts, and safely remove them at the end of the feeding or when the latch is incorrect.

Common Breastfeeding Positions
Watch demonstrations of the three most common ways to hold your breastfeeding baby.

Hand Expression by UNICEF
This video guides you through how to hand express, and talks about the times when hand expression might be useful for you.

Hand Expression in Breastfeeding
Breast milk is nature’s way of making sure your baby receives the maximum nutrition possible. When a mom needs to be away from her baby, or for other reasons, it’s a good idea to know how to hand express milk. This segment will address the importance of hand expression when breastfeeding an infant and the benefits to mother and baby, as well as the specific techniques involved.

Handling Stress with Breastfeeding
Motherhood and breastfeeding don’t have to be stressful. Women share their tips for relieving stress to enable them to successfully breastfeed while they ease into their new role as a mom.

Helpful Strategies for Successful Breastfeeding
Watch some common, effective strategies that may help make breastfeeding easier.

Breastfeeding (continued)

Is Baby Getting Enough Breast Milk?
Sometimes it’s hard to tell if your newborn is eating enough to grow and stay healthy. Experts explain the signs you should watch for to make sure your baby is getting enough to eat.

Is My Baby Getting Enough Milk?
Many new moms are concerned that their baby is getting enough milk. Pediatrician Sahira Long, MD IBCLC, answers new moms’ most common questions and explains the signs that your baby is eating and growing at a healthy pace.

Steps for Hand Expression
The Baby Friendly Initiative recommends that all mothers are taught how to hand express. It is a valuable skill in many situations, such as where the mother’s breasts are engorged or where mother and baby are separated, perhaps through the baby being born preterm or sick, or when the mother returns to work. This video will help walk you through the steps of hand expression.

Uncovering Breastfeeding Misconceptions
There are myths and misconceptions about breastfeeding that can impact a mother’s decision to breastfeed. Hear stories from moms who uncovered the myths to make the best decision for themselves and their baby.

Child Safety

Car Seats Aren’t Cribs: Safe Sleep for Baby
Car seats are essential for keeping your baby safe on planes, trains, and automobiles. But these seats, along with infant swings, standing seats, and other infant carriers can be dangerous when used for sleep or napping. Learn what positional asphyxia is, how to position your baby to keep his airway clear when seated, and how to ensure your baby always has a safe sleep environment.

Choking Prevention Skills
Choking is one of the most common fears among new parents. Many small things a young child may try to put in his or her mouth can cause choking. It’s important to be able to recognize the signs that a child is choking, and to know the proper techniques to help save them.

Drugs and Pregnancy
Taking any medications, including over-the-counter medications and supplements, can be harmful in pregnancy. Speak with your physician about all medications you are taking to determine if they are safe to continue taking during pregnancy.

How to Make Your Furniture Safe for Kids
If you live in a house where small children reside or visit, you’ve probably put away the breakables and covered the outlets. But here are some other safety precautions you may have missed.

Infant and Child Safety in The Home
This program provides parents with basic information on protecting their little ones. It focuses on the safety measures for parents to consider throughout their home, included are ways to child proof their home to help keep baby safe.
Child Safety (continued)

Infants and Children in the Hospital
More than three million children are hospitalized in the United States every year. Learn about ways to make the hospital stay as safe as possible. Also, your newborn's first checkup will happen in the hospital, which includes screening tests, immunizations as well as advice about the baby's care and condition.

Keeping Baby Safe (Part 1)
One of the most important jobs a new parent has is taking good care of their baby. There are so many basics to learn that sometimes safety takes a back seat. In "Keeping Baby Safe" parents will learn about co-sleeping and other sleep issues, giving medication and what to do to help prevent injuries.

Keeping Baby Safe (Part 2)
In Part 2 of "Keeping Baby Safe" you will learn more about taking good care of your baby.

Newborn Care: Installing Your Car Seat
Watch demonstrations of how to install an infant car seat using both a seat belt and a LATCH system.

Newborn Care: Safety Tips
Watch this video to learn what you need to do to prevent accidents and fatalities in the crib and in the car.

Pregnant? Think! Don't Drink!
Children exposed to alcohol in utero are at risk for growth deficiencies, facial deformities, central nervous impairment, behavioral disorders, and impaired intellectual development. Fetal Alcohol Spectrum Disorders (FASD) is 100% preventable if women don't drink while pregnant. If a woman is pregnant and can't stop drinking, help is available.

Protecting Your Newborn from Flu
Studies show that young children are at high risk for serious flu-related complications. Learn more about the flu and simple steps you can take to keep young children safe.

When to Call the Doctor
New parents are sometimes hesitant to call their pediatrician or nurse practitioner when they think their baby is ill. This program outlines the warning signs to watch for that mean your child needs to see their healthcare provider.

Which Houseplants are Toxic to Kids and Pets
Houseplants clean stuffy indoor air and are a great source of stress relief. But some common types can be toxic to kids and pets. Here's how to tell.

Development (continued)

Infant Milestones & Care: 8 to 12 Months
After watching this program, the viewer should understand the developmental milestones a parent should expect to see in their baby at 8 to 12 months. The series will include vision, hearing, social, and movement guidelines, as well as important signs of possible health issues.

Infant Milestones & Care: Birth to 3 Months
After watching this program, the viewer should understand the developmental milestones a parent should expect to see in their baby at birth to 3 months. The series will include vision, hearing, social, and movement guidelines, as well as important signs of possible health issues.

Mother Knows Best
This program teaches Moms the importance of trusting their own parenting instincts at a time when so much advice is given along with how to handle their doubts and know that their baby is their best teacher. It also discusses the value of touch and meeting their baby's needs and explores the options parents need to consider when choosing a caregiver that is right for their family and lifestyle.

Music Class For Moms and Their Babies
This program discusses a fun way for parents to interact with, teach and entertain their child.

Your Newborn's Appearance
Learn the common physical characteristics of a healthy newborn.

Discharge From The Hospital
Going Home with Baby: Your Discharge (Part 1): Going Home Basics
Leaving the hospital with a newborn is an exciting and potentially nerve-wracking time for a new mother. This 4 part series arms you with the information you need to head home from the hospital with confidence. Part 1 covers "Going Home Basics". Get vital information about support at home, screening tests at the hospital, paperwork for your child, and other discharge information.

Going Home with Baby: Your Discharge (Part 2): Taking Care of Mom
Part 2 of the "Going Home With Baby: Your Discharge" series covers "Taking Care of Mom." Find out how to take care of yourself physically and emotionally after a vaginal or cesarean delivery.

Going Home with Baby: Your Discharge (Part 3): Caring for Baby
Part 3 of the "Going Home With Baby: Your Discharge" series covers "Caring for Your Baby." Baby basics, from head to toe, to keep your baby happy and healthy.

Going Home with Baby: Your Discharge (Part 4): Keeping Baby Safe
Part 4 of the "Going Home With Baby: Your Discharge" series covers "Keeping Baby Safe." Learn about safe sleep, shaken baby syndrome, car seats, infant CPR, and more.
From the Start provides an overview of how to start your child eating properly and keep them doing that throughout life. Our program "Healthy Eating From the Start (Part 1)" provides feeding and nutritional information for your baby. In Part 2 of "Healthy Eating From the Start", learn more about how to start your child eating properly and keep them doing that throughout life.

Infant Feedings
This program provides feeding and nutritional information for baby during the first four weeks of life. Breast milk is ideal but there are reasons some mothers choose to formula feed, including work, health issues and personal choice. Information on formula preparation assures Mom that her baby is provided with the nutrition needed to grow and thrive.

Jaundice and Your Newborn
Jaundice is a common and usually harmless condition in newborn babies that can cause long-term medical problems if not diagnosed. This program provides mothers with information about what the signs of jaundice are, what to do if a new mother suspects jaundice and provides the key recommendations of the American Academy of Pediatrics on how to treat jaundice.

Massaging Baby's Stress Away
Babies are surrounded by new stimulation that can be tough to process. This program teaches parents how, through massage, they can help to ease baby's stress and possible even help in improving baby's sleep patterns.

Neonatal Abstinence Syndrome
Neonatal abstinence syndrome, or NAS, is a group of health conditions a newborn has if he is exposed to opioids and certain other addictive drugs while in the womb. Experts explain what health problems a baby with NAS may have, and how to care for them.

Newborn Care: Common Health Concerns
Learn common symptoms of illness, and when to call your baby's healthcare provider. The PKU test, jaundice and the correct use of thermometers are explained.

Newborn Care: Formula and Bottle Feeding
Watch to learn the basic instructions for formula feeding your baby.

Newborn Care: How to Take Your Newborn's Temperature
Watch this video to understand the proper methods for getting a safe and accurate reading of your baby's temperature.

Power of a Parent's Touch
Almost every baby in the world undergoes painful medical procedures in the first few hours and days after birth. Researchers have found that performing skin-to-skin or kangaroo care offers numerous benefits to babies including relieving their pain.

Soothe Your Baby
Nothing rattles a new parent more than a baby that just won't stop crying. The good news is that new parents quickly pick up on their child's cues and what their cries are signaling most of the time. Watch these top tips for calming a crying baby to learn more.
Healthy Baby (continued)

The 3 Stages of Labor
Labor, also called childbirth or giving birth, is the process by which the baby and the placenta leave the mother. This video, by the National Institute of Child Health and Human Development, describes the three stages of labor: early labor, active labor, and delivery of the placenta and afterbirth.

Understanding Why Babies Cry
This program provides tips to help mothers manage a crying baby with confidence. It provides practical recommendations to calm and soothe baby.

What to Expect at a Baby Friendly Hospital
Understand what to expect at a hospital with a baby friendly designation including skin to skin contact, learning to breastfeed correctly and rooming in.

Your Baby’s Oral Health
This program instructs parents on the importance of oral health for their child. A variety of topics are covered such as when, why and how to stimulate and/or brush babies teeth and gums, teething and caries. Also addressed are what Moms should do in terms of breast care, bottles, nipples, pacifiers and oral hygiene.

Healthy Mom

Back in Shape
In the program, learn what a Mom can do to start getting back in shape shortly after she leaves the hospital.

Gestational Diabetes: Managing Hypoglycemia
Learn how to recognize the symptoms of hypoglycemia, how to treat it if it happens, and the importance of discussing it with your healthcare provider.

Managing Gestational Diabetes with Single-Dose Insulin Injections
Watch how to prepare your supplies and properly inject a single dose of insulin.

Yoga For Moms and Their Babies
Exercise is a great way to reduce stress, speed up recovery, and get back in shape. Yoga provides all of these benefits, and can also be a fun way to bond with baby.

Healthy Pregnancy

Baby’s Almost Here: Enjoying the Final Weeks of Pregnancy
This program reminds viewers how babies are more ready to face the world when they're born at or close to full-term (40 weeks), as it discusses the optimal health of full-term babies (though babies born at 37 weeks may look mature, they are not fully developed). It also encourages women to maintain a healthy lifestyle during pregnancy and to take time for themselves in the final weeks. It underscores how good preparation makes bringing baby home easier and inspires new mothers to savor every second with their newborn, watching as the newborn adjusts to the world.

Immunizations

Immunizations: The Facts (Part 1)
This program discusses why immunizations are important, how they work and provides an overview of the vaccination schedule for newborns.

Immunizations: The Facts (Part 2)
Part 2 of "Immunizations: The Facts" discusses the safety of vaccines, how effective they are and why older family members need to keep records of their immunizations as well.

Infant and Mom Sleeping

SIDS and Safe Sleep (Part 1)
Sudden Infant Death Syndrome is a confusing and mysterious disease. Our program "SIDS and Safe Sleep" explains the basics about this syndrome. It also features practical tips for new parents on how to make sure their new baby sleeps as safely as possible.

SIDS and Safe Sleep (Part 2)
In Part 2 of "SIDS and Safe Sleep" learn more about Sudden Infant Death Syndrome.

Swaddling Your Baby
Swaddling, or snugly wrapping your baby in a blanket, is a great way to comfort a newborn. But it should be done a certain way to keep your baby safe and healthy. Learn how to properly swaddle your baby, what precautions to take, and other tips from experts.

Sweet Dreams
This program helps resolve sleep issues with baby so that everyone can get a good night's sleep.

Top 10 Things to Get Baby Off to Sleep
This program discusses the top ten ways to help your baby get to sleep. The topics covered include recognizing baby's sleep signs, having a consistent bedtime routine, making sure the crib is safe and the importance of Mom getting sleep herself.

Infant Hearing

What Baby Hears
This program details the importance of newborn hearing testing and how screening tests are administered. Information on why the screening is necessary to promote optimal child development is provided along with an explanation of the screening procedure complete with visual equipment display. Parents are reassured that no harm or pain is experienced by the baby.

Postpartum Care

Down-There Care: Recovery from Delivery (Part 1)
Part 1 teaches Mom how to care for herself after vaginal birth. Topics addressed include episiotomy, hemorrhoids, Iochia, Sitz Baths, etc. Part 1 concentrates on what to expect and how Mom can take care of herself.

Down-There Care: Recovery from Delivery (Part 2)
Part 2 features things to watch for once Mom goes home. The importance of a post-delivery exam and the role healthy eating and exercise play in recovery.

New Mom: What to Expect During Your Hospital Stay
Understand what to expect during your hospital stay after birth including your health, bonding with your baby and using fall prevention and other safety strategies.
Postpartum Care (continued)

Postpartum Care: Changes in Your Body After Delivery
Watch this video to learn how your uterus recovers after delivery, why you will have night sweats, and how your breasts prepare to feed your newborn.

Postpartum Care: Emotions
Watch this clip to understand how hormone changes often cause sadness and post-partum depression in new moms, and how friends and family members can support her.

Postpartum Care: Your Follow-up Appointment
Watch this video to learn what your provider will check and discuss with you during your first healthcare visit, which should occur about six weeks after delivery.

Postpartum Care: Your Physical Recovery
Learn strategies to help manage the physical discomforts experienced during the first few days following delivery.

Postpartum Depression: You’re Not Alone (Part 1)
Are those emotional ups and downs the baby blues or something more serious? This program discusses the emotional responses during the postpartum period and changes in hormone levels. Part 1 explains what Postpartum Depression really is and how to recognize it.

Postpartum Depression: You’re Not Alone (Part 2)
In part 2 we share the emotional experiences of new Moms. The program also explains danger signs, the importance of support groups and ways to get help if needed.

Postpartum Nutrition
Understand the importance of making healthy food choices and learn some tips for choosing foods as you heal and recover from childbirth while caring for your newborn.

Recovery from Cesarean Birth (Part 1)
With cesarean birth on the rise, this program provides women with information about their recovery. Part 1 explains how to manage pain from major abdominal surgery and breastfeeding modifications for Mom.

Recovery from Cesarean Birth (Part 2)
Part 2 of the “Recovery from Cesarean Birth” program explains how to handle your changing emotions, how to improve healing and tips for recovering at home.

Premature Birth (continued)

When Baby Arrives Early
This program helps new moms cope with the uncertainty that can come with having a preemie. “When Baby Arrives Early” shows how to care for a premature infant while in the hospital and during those first few days at home. Healthcare professionals and Moms openly discuss how they face the uncertainty.

Shaken Baby Syndrome
A Life in Your Hands: Preventing SBS - Controlling Your Emotions
The majority of Shaken Baby Syndrome Cases are caused by caregivers and parents, and the majority of those are father or father figures. Here are tips for learning to control your emotions when a baby won’t stop crying.

A Life in Your Hands: Preventing SBS - Effective Tips to Soothe Your Baby
All babies cry sometimes, and some babies cry for long periods of time and can’t be consoled. These tips can help you deal with a crying baby, before you get frustrated.

A Life in Your Hands: Preventing SBS - What is Shaken Baby Syndrome?
Shaken Baby Syndrome is a preventable tragedy. Learn about the causes, symptoms, and types of injuries caused by Shaken Baby Syndrome.

Portrait of Promise
“Portrait of Promise” provides hope and reminds viewers that the key to preventing Shaken Baby Syndrome lies in our hands. It explains Shaken Baby Syndrome and its effect on the infant. Real life stories are shared. This program will help accommodate state teaching requirements.

Premature Birth

Special Care for Your Preemie
Babies that arrive early need extra special care. This program discusses what parents of preemies can expect from the Neonatal Intensive Care Unit, or NICU, bonding with your special needs baby and tips on bringing your preemie home.
